

A game for CPC computers
by Kevin Freeman

plumber droid

BARE you enter the chamber of an earthquake-damaged chemical processing unit? Hazardous acidic gases have been released, and you must use the plumber craft to reconnect the pipelines, which will be displayed for a time in their correct positions.

Avoid the roaming disruptor droid - any contact and it will be transported to the start position. This must be completed before the gases eat their way through the shell of the plumber craft.

You have the option of using joystick or keyboard.

This program creates its own machine code and checks for typing mistakes, but cannot check for some errors. If you get the message "Type mismatch in 2620" you have made a mistake in the DATA. By typing GOTO 2770 when you get the error you should get a rough idea of where the mistake is.

Have fun!

```
