

3-D Maze

by Nigel Sharp.

So you think Hampton Court is difficult? This maze is on 4 levels and there's no way you can peek through the hedges.

In this game you are shown a 3D view of the maze ahead of you through which you must search for the hole which leads to the next level. On the last of the four levels of the maze each level is on a large grid measuring 32x15 blocks, your ultimate destination is shown as a blue cross on the floor. To help you on your way, a compass and a map are given. The watch is that the map only shows the route you have taken - it starts off just showing your location and the position of the hole leading to the next level. There is a high score table on which to enter your name and a feature to look forward to, should you finally complete the maze. Good Luck!
